Art Unit: 1646

- 1) Claims 1 to 50 are pending in the instant application.
- 2) Claims 41 to 46 have not been treated for restriction purposes because no meaningful interpretation can be made of them in their current form.

- 3) Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 1 to 24 and 49, drawn to an isolated nucleic acid encoding a calcium sensing receptor isoform, the protein encoded thereby or a portion thereof, and a method of using the claimed nucleic acid to produce the claimed protein, classified in class 435, subclass 69.1, class 530, subclass 350 and class 536, subclass 23.5.
- II. Claims 25 to 29, drawn to a receptor assay employing a recombinant cell, classified in class 435, subclass 7.21.
- III. Claims 30 to 33, drawn to a method of treatment by administering a compound of unspecified constitution, classification undeterminable.
- IV. Claims 34 to 40, 47 and 48, drawn to a method of gene therapy, classified in class 514, subclass 44.
- V. Claim 50, drawn to an antibody which binds to a structurally undefined polypeptide, classified in class 530, subclass 388.22.

Art Unit: 1646

The inventions listed as Groups I to V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The process of invention II is a process which can employ a product of invention I but is not limited thereto. Therefore, invention II does not share a corresponding special technical feature with invention I.

The compound employed in the method of invention III is presumably structurally unrelated to either the protein or the nucleic acid of invention I and, therefore, the protein and nucleic acid of invention I and the compound employed in invention III lack a corresponding special technical or structural feature.

The process of invention IV employs neither the protein or the nucleic acid of invention I and, therefore, lacks a corresponding special technical feature therewith.

The antibody of invention V is structurally unrelated to the nucleic acid and protein of invention I.

Because these inventions lack unity of invention for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1646

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
